TRANSMISSION FILTER KITS

PREMIUM TRANSMISSION FILTER KITS

Enhanced Performance & Protection

Premium Guard® Select Transmission Filter Kits improve performance and longevity by protecting sensitive shift control valves.

Exceptional Reliability

Engineered to meet original equipment performance and fitment specifications, our premium transmission filter kits feature an OE style, re-usable NBR rubber gasket which is molded over a sheet metal backing strip to enhance support and maintain its shape until use. As an added shape-protecting measure, the gasket is packed flat on rigid cardboard backing.

Peace of Mind

Premium Guard Select Transmission Filter Kits offer installers peace of mind with bolt holes lined with torque-limiting metal spacers that protect against over-tightening. This feature helps to prevent pane bolts from becoming stripped during installation and ensures that they're less likely to snap when removed for future service.
